

ABHIJITH GIRISH

DATA ANALYST

Analytical and detail-oriented Computer Science Engineering student specializing in Artificial Intelligence and Machine Learning. Proven hands-on experience in data science methodologies, predictive tasks, and training frameworks through structured industry internship work. Seeking an entry-level technical role to leverage solid programming foundations and contribute to data-driven software solutions.

EDUCATION

Bachelor of Engineering Computer science(AI&ML)

Aarupadai Veedu Institute of Technology

2023-2027

- Specialization in advanced, data driven intelligence.
- Core depends on equipping systems to learn, predict, and automate tasks.

SKILLS

- Programming: Python, Java, C++, SQL
- Machine Learning & Deep Learning Algorithms
- Data Structures & Algorithms (DSA)
- Libraries: NumPy, Pandas, Scikit-Learn
- Database Management Systems (DBMS)
- Developer Tools: Git, GitHub, VS Code
- Fluency in English

ACADEMIC & PERSONAL PROJECTS

AI/ML PROJECT

Machine Learning Based Predictive Model

July 2026 - Present

- Developed a predictive machine learning model using Python and Scikit-Learn to analyze datasets and forecast accurate trends.
- Implemented data preprocessing, handled missing values, and utilized feature engineering with NumPy and Pandas to optimize performance.
- Evaluated model efficiency using classification metrics, achieving a high prediction accuracy rate.

JAVA PROJECT

Application Development using Java

Academic Lab Project

July 2026 - Present

- Designed and built a structured application using Java incorporating Object-Oriented Programming (OOP) design patterns.
- Implemented clean algorithmic logic to manage data handling, object interactions, and system workflows efficiently.
- Conducted rigorous unit testing and debugging to minimize system errors and ensure software stability.

DATABASE/WEB PROJECT

Database Management System (DBMS) Project

July - Present

- Designed a relational database schema using SQL to store, manage, and manipulate structured data with optimized keys and relations.
- Authored efficient, complex SQL queries, joins, and subqueries to enable fast data retrieval and reporting operations.
- Utilized version control systems like Git and GitHub to manage code tracking, documentation, and project progression.
